About CRISP

At CRISP, our purpose is to ensure health information follows the patient, enabling better, faster, and safer care for every Marylander. We believe that healthcare works best when the right information is available to the right people at the right time. By securely connecting providers, health systems, and public health agencies, we help eliminate barriers to data, reduce unnecessary costs, and empower clinicians and communities to improve health outcomes.

Hospitals & Health Systems

- ADT Data - Encounters, Diagnoses, Labs, Meds
- CCDs
- Radiology Images
- Discharge Summaries

Payers/State Agencies

- Claims - Medicaid, Medicare, Hospital All-Payer
- Local and Interstate PDMP
- Vital Statistics
- Public Health Data

LapCorp/Quest

- Laboratory results

CRISP Participants*

- Patient Panels
- Radiology Images
- Care Notes, Advance Directive, and Care Alerts
- Patient Consents
- SDOH & CBO Referrals

As Maryland's designated Health Information Exchange (HIE) and Health Data Utility, CRISP plays a central role in making health data actionable. We work in partnership with healthcare organizations, state agencies, and community providers to support whole-person care, inform public health strategies, and advance health equity. Our work spans clinical information tools, care coordination, reporting and dashboards, public health services, and program administration — each designed to help our participants deliver more connected, informed, and equitable care.

"I've been in the field 30 years and this significantly improves patient care via availability of information regarding prior medical engagement, access to outside radiology, and the like."

- Social Worker, John's Hopkins Hospital

Security & Privacy Commitment

CRISP is committed to protecting the privacy and security of health information through rigorous safeguards, regular audits, and adherence to all applicable regulations. We conduct ongoing cybersecurity and privacy monitoring, including tools that detect and investigate suspicious activity. Operating within Maryland's opt-out framework, with specific exceptions such as PDMP, we also provide a Consent Tool that enables patients to control the sharing of sensitive health data, ensuring privacy while supporting coordinated, compliant care.
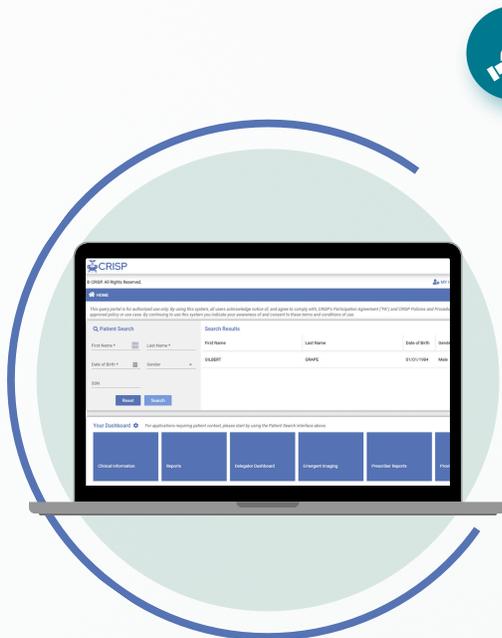

Mission

We support the healthcare community of Maryland and our region to appropriately and securely share health information in order to facilitate care, reduce costs, and improve health outcomes.

Vision

To advance health and wellness by deploying health information technology solutions adopted through cooperation and collaboration.

Point of Care
Access prior records and care team info.

Care Coordination
Real-time hospital admission and discharge event alerts.

Reporting & Anayltics
Dashboards to measure outcomes and interventions.

Public Health
Data services & tools for state and local health officials

Program Support
Support for policy, best practices, and transparency

Technical Integration
Seamless connections with clinical systems
