CAliPHR | CQM Aligned Population Health Reporting Tool

Assisting Providers With Incentive Programs (Pilot Program)

What is the CQM Reporting Tool?

The CRISP CAliPHR Tool is designed to give Eligible Providers (EPs) and Hospitals (EHs) the ability to meet the requirements of federal and state incentive programs. The tool allows providers to calculate and report clinical quality measures (CQMs), which are tools used to ensure that health care providers are delivering effective, safe, and timely care to patients. Clinical data will be transmitted from EPs and EHs to the CAliPHR solution on an ongoing basis, and securely stored for CQM calculation and reporting.

How Does It Work?

CAliPHR relies on incoming consolidated-clinical document architecture (CCDA), or quality reporting document architecture category 1 (QRDA 1) feeds from providers that participate. These feeds are generated and sent by hospital's, health system's or practice's electronic health records (EHR) and the clinical information is stored in the CAliPHR's clinical data repository. The measure engine then utilizes this data to calculate various CQMs. A QRDA 3 message containing aggregated, de-identified data is generated for reporting purposes. EPs and EHs have access to a user portal that allows them to view their respective measure results and patient level data.

What are the Benefits of Participating in the CQM Reporting Pilot?

○ CQMs give a snapshot of a provider's performance over a period of time. This information is useful for making the necessary adjustments to improve the quality of care.

○ Practices and providers will be able to report their CQMs for the Medicaid EHR Incentive Program electronically through CAliPHR.

○ The cost of implementing the interface between a Medicaid practice and CRISP is paid for by grant funds and use of the tool will be free.

○ Enable auto-subscribe function of the Encounter Notification Service (ENS) in lieu of creating monthly patient panels manually.
