CRISP COVID-19
Point-of-Care Reporting Tool

Organizations who are performing point-of-care COVID-19 testing are required to report results to the Maryland Department of Health through CRISP if they do not have access to an existing mechanism for reporting. CRISP now provides clinicians with a reporting tool within the Unified Landing Page (ULP) that allows facilities that offer point-of-care COVID-19 testing to report data, for all testing completed, to the State.

How to Report Point-of-Care COVID-19 Test Results through CRISP:

- Log into your CRISP ULP account
- Search the patient for whom you are submitting test results. (First Name, Last Name, and Date of Birth are required)
- Select the appropriate patient from the Patient Search Results list by checking the box in the "Include" column on the right-hand side of the screen
  - If your patient is not found, click the "No Patient: COVID-19 Lab Tools" tab at the top of the screen to manually begin the submission process
  - If your patient is found, click the "COVID-19 Lab Tools" tab at the top of the screen
- Navigate to the "Report Point of Care Test Results" tab.
- Complete the fields provided.
  - Please note, the supplementary questions on this form are required for reporting to the Center for Disease Control (CDC).
  - Click Submit.

Please note, we have renamed the "COVID-Lab Order" and "No Patient: COVID-19 Lab Order" tabs to "COVID-19 Lab Tools" and "No Patient: COVID-19 Lab Tools" to provide streamlined access to CRISP COVID-19 tools as more become available in the future. COVID-19 test results can still be viewed within the "COVID-19 Results" tab.
