Re: DPP Referral Scale Target Reduction

After reviewing Regional Partnership performance to date, HSCRC staff has decided to reduce the annual DPP Referral scale targets by 50 percent for CY 2022 and CY 2023. These changes will be reflected in your CRISP monitoring report in the coming weeks. Please continue to report your DPP referrals to CRISP using the new process.

Given these changes to the DPP Referral targets, HSCRC and CRISP is conducting a comprehensive review of the other DPP scale targets to determine whether adjusting those numbers is appropriate.

HSCRC is also reviewing DSMT scale target expectations and reached out via email on Friday, September 2, 2022 requesting supplemental information from each Regional Partnership on DSMT initiation. To support our review process, we request you provide the requested information (if available) by September 16, 2022.

Staff will provide an update on its decisions later this fall. For additional questions, please email hscrc.grants@maryland.gov.
