

Episode Costs

What Episode Costs are Included in EQIP?

Total relevant costs for a single episode include all Medicare Parts A and B claim payments for the beneficiary for services that are rendered during the episode period and linked to the episode.

Relevant costs are services and costs that are clinically associated with the condition or treatment of the Episode, regardless of who provides them. This includes:

- Inpatient stays
- Outpatient visits
- Imaging
- Labs
- Part B drugs
- Physician services
- DME (Durable Medical Equipment), if applicable

Relevant costs/associations can be found in the Episode Workbooks that are linked in the [Episode Playbook](#).

Where Does EQIP Receive Data on Episode Costs?

Episode triggers and episode-relevant costs are derived from Claim and Claim Line Feed (CCLF) data provided by CMS to the State of Maryland.

There are no additional reporting requirements for EQIP participants!

Total Episode Cost Methodology

After all PACES and non-PACES episodes are created, total episode costs are derived as follows:

1. Total episode costs for a single episode include all Medicare Parts A and B claim payments for services linked to episode. Denied claims are excluded. Medicare Part D expenditures are also excluded.
2. Total payments for included service types are summed to calculate the total episode costs.

Please visit the [EQIP Specifications and Methodology Guide](#) for more information on Total Episode Cost Methodology.
