

INTRODUCING *TIMELINE VIEW*.

A Streamlined Way to View Key Laboratory Testing Data in InContext

What's New:

This new feature within *InContext* allows users to view a patient's laboratory testing data in a timeline format, enabling easy identification of data trends over time.

What is Staying the Same:

The "*List*" (classic) view of information will remain available. Users can toggle between the "*List View*", and the "*Timeline View*."

In the "*Laboratory*" tab of the patient's "*Health Record*", page, users will see the original "*List*" icon. The new "*Timeline View*"

icon is placed to the right of the "*List*" icon, enabling quick toggling between two views.

User Benefits:

- Enables users to more easily identify changes to patient labs and see trends over time
- Saves the user time, limits clicks and searches
- Supports informed decision-making with faster access to relevant data

Select the "*Timeline View*" icon to view available laboratory results. Default view is the most recent 3 months, with up-to 5 years' data available to filter.
